

## Fine Pulverizing Roller Crusher

• Fine pulverizing roller crusher is an equipment to crush and roll the materials for refining treatment; it is mainly used for crushing soft materials.

For crushing soft materials of input granule size smaller than 10mm, such as clay, shale and etc.

Two rollers with different rolling speeds operate in counter directions; the working clearance cannot be more than 2mm.

Roller structure

Roller ring and roller axis

**Primary structure:** electromotor, roller ring, scraper, roller

**Equipment advantages:** A material arranging machine is set on the roller ring, so that in width the whole roller ring can exert the crushing effects, thus improving crushing degree of fineness and capacity, meanwhile, making sure the

**Equipment parameters:**

<b>Model</b>	<b>Production Capacity (m3 /h)</b>	<b>Equipped Power (KW)</b>	<b>Dimension (mm)</b>
<b>GS100*80B</b>	30-40	Y6-37*2	5600*1850*1750
<b>GS80*60B</b>	25-35	Y6-22*2	3150*1700*1520
<b>GS70*50B</b>	15-25	Y6-18.5*2	2940*1430*1440

IBRICK supply multiple types of crushing machine suitable for your materials and production capacity, our products apply in Russia, Kazakhstan, Uzbekistan, India, Bangladesh, Egypt, Angola, Mexico, Chile, Peru, Brazil and other countries.
